

## NEW Energy & Utility Skills (EUSR) Registration Scheme for Telecoms

**Energy and Utility Skills** are now managing the approval of training companies against the MATS standard.

As from the 1<sup>st</sup> January 2020 the MATS group will require all candidates to be registered on the EUSR registration system (Quartzweb).

As an E&US approved training provider we will be required to register your details.

The courses included under this scheme are:

- Initial Basic Tower Climbing and Rescue (TTS2U)
- Tower Climbing and Rescue Reval (TTS2UR)

The following courses include the above modules:

- Industrial Climbing and Rigging (TTS7U)
- Telecom Climber, Roof & RF Hazards (TTS8U)

On completion of registration, virtual ID cards can be accessed together with an identity number.

If candidates are already registered with EUSR they must provide their ID numbers at course registration. First time registrants must provide a digital passport photo (.jpg format) when booking in order to access their virtual EUSR card.

**Please note: The Industry (Arqiva) will only recognise new climbers and revalidations who are registered on this system (Quartzweb – eusr.co.uk).**

Existing certificates will be accepted by Arqiva until they expire (within 2020) then only recognised qualified climbers registered on Quartzweb. Companies can access the Quartzweb register to check if climbers are qualified using their registration number and name.
